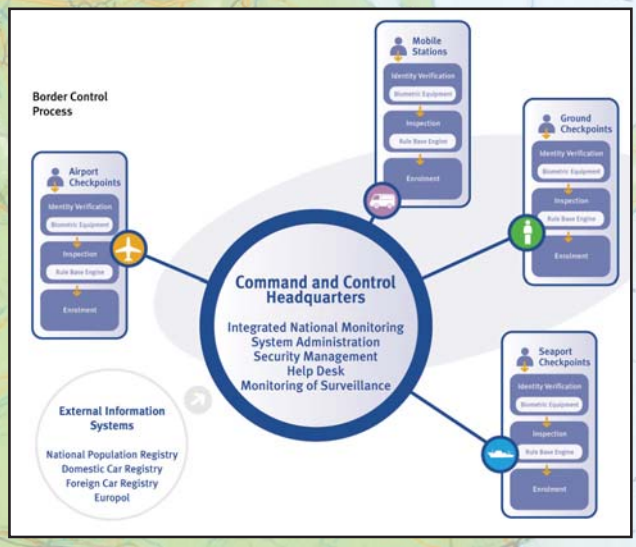
Your Most Important Milestone On The Road To Secure Borders

Elbit Systems' Border Control and Management System (BCMS) is a state-of-the-art system that supervises and controls all border movements. The automated, efficient system is designed to detect and thwart border intrusion attempts, identify forged documents, prevent illegal immigration, stop smuggling, combat cross-border crime, in addition to monitoring and administering passengers, vehicles and cargo.

Major Functionalities

- Supervises, tracks and records arrivals and departures - passengers, cars, cargo
- Implements entry, exit and stay laws within a nation's territory
- Enforces import and export tax regulations on cargo
- High performance as a result of combining high-end, best-of-breed technology solutions

Generic and Modular - tailored to meet every operational demand


- Supports dozens of synchronized diverse sites
- Administers and monitors all points via regional C^2 sites
- Provides an integrated border control overview via National C^2 headquarters
- Complies with latest, relevant standards, e.g., Schenegan Agreement
- Integrates National and International external information systems, such as Europol Information System and National Population Registry
- Implements best-of-breed biometric identification technologies in order to automate processes and authenticate initial identification
- Incorporates area surveillance sensors and monitoring capabilities
